STEM Education from Asia Aug 31 2020 Asia is the largest continent in the world. Five out of the top ten high performing economies in the Programme for International Student Assessment (PISA) 2018 are located in Asia. Why do Asian students perform so well in STEM-related subjects? This book answers this by examining the STEM education policies and initiatives in Asian economies, as well as the training programmes undertaken by STEM teachers in Asia. The book is broken into four sections, each accompanied by a passage of commentary that summarizes the key takeaways of the chapters. Section one focuses on STEM policy environments and how various countries have developed policies that promote STEM as an integral part of national economic development. Section two focuses on STEM teacher education in the Philippines and Thailand, while section three focuses on STEM curriculum design, context, and challenges in four Asian economies. The fourth and final section focuses on presenting snapshots of STEM education research efforts in Malaysia, South Korea, and Singapore. Written by Asian academics, this book will provide valuable insights to policy makers, educators, and researchers interested in the topic of STEM education, especially in the Asian context. Chapters 7 and 11 of this book are freely available as a downloadable Open Access PDF under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license available at <http://www.taylorfrancis.com>

Institutionalized Learning in America Apr 26 2020 Despite the vast amount of research on teaching, very little of it has related overall theoretical perspectives to general principles of teaching and instruction. Keenly aware of this, Ornstein's primary criteria for selection of the material in this book is its value to those concerned with the practice of teaching and instruction and with the interaction of students with teachers. Institutionalized Learning in America mixes theory and practice, presenting proven methods that are based on research and that have been demonstrated to work. No one set of strategies or methods is offered, providing the reader with the opportunity to select from many different approaches. The book is divided into four parts and twenty chapters. Part I, on teaching, provides an overview of research on teaching and teacher effectiveness. Part II, on learning, discusses how information to be learned is organized and taught, as well as how to evaluate what has been learned. Part III, on instruction, emphasizes planning and organizing content and experience in a meaningful way. Part IV deals with effective schools. Institutionalized Learning in America will be of interest to researchers and practitioners of the art of teaching, as well as those interested in applications of cognitive psychology.
