## **Big Data-Enabled Nursing** Sep 03 2020

Historically, nursing, in all of its missions of research/scholarship, education and practice, has not had access to large patient databases. Nursing consequently adopted qualitative methodologies with small sample sizes, clinical trials and lab research. Historically, large data methods were limited to traditional biostatistical analyses. In the United States, large payer data has been amassed and structures/organizations have been created to welcome scientists to explore these large data to advance knowledge discovery. Health systems electronic health records (EHRs) have now matured to generate massive databases with longitudinal trending. This text reflects how the learning health system infrastructure is maturing, and being advanced by health information exchanges (HIEs) with multiple organizations blending their data, or enabling distributed computing. It educates the readers on the evolution of knowledge discovery methods that span qualitative as well as quantitative data mining, including the expanse of data visualization capacities, are enabling sophisticated discovery. New opportunities for nursing and call for new skills in research methodologies are being further enabled by new partnerships spanning all sectors.

**Safeguarding Intangible Heritage** Apr 10 2021 The UNESCO Convention for the Safeguarding of the Intangible Cultural Heritage came into force in 2006, framing the international and national practices and policies associated with intangible cultural heritage. This volume critically and reflexively examines these practices and policies, providing an accessible account of the different ways in which intangible cultural heritage has been defined and managed in both national and international contexts. As Safeguarding Intangible Heritage reveals, the concept and practices of safeguarding are complicated and often contested, and there is a need for international debate about the meaning, nature and value of heritage and what it means to

‘safeguard’ it. Safeguarding Intangible Heritage presents a significant cross section of ideas and practices from some of the key academics and practitioners working in the area, whose areas of expertise span anthropology, law, heritage studies, linguistics, archaeology, museum studies, folklore, architecture, Indigenous studies and history. The chapters in this volume give an overarching analysis of international policy and practice and critically frame case studies that analyze practices from a range of countries, including Australia, Canada, China, Indonesia, Japan, Korea, Kyrgyzstan, New Zealand, Taiwan, the UK and Zimbabwe. With a focus on conceptual and theoretical issues, this follow-up to Intangible Heritage, by the same editors, will be of great interest to students, scholars and professionals working in the fields of heritage and museum studies, heritage conservation, heritage tourism, global history, international relations, art and architectural history, and linguists.

#### **Complimenting Behavior and (Self-)Praise across Social Media**

Mar 21 2022 The present volume focuses on complimenting behavior, including the awarding of (self-)praise, as manifested on social media. These commonplace activities have been found to fulfil a wide range of functions in face-to-face interaction, discursal and relational amongst others. However, even though the giving of compliments and praise has become a pervasive practice in online environments, it remains a largely underexplored field of study within pragmatics. Self-praise is an activity that appears at the present time to be rapidly gaining ground online, and the various functions it performs clearly also need further investigation. The different contributions to this ground-breaking volume – 12 in total – aim to address this gap in research by exploring and shedding light on a number of aspects of these

phenomena in a range of languages and language varieties. New socio-digital contexts are examined, supported in some cases by social networking sites not previously studied in complimenting behavior research. These include Facebook, Instagram, Renren, Twitter, as well as web forums, message boards and live text commentary.

*Radical Botany* Apr 29 2020 "Succeeds beautifully in discovering and entwining an entire tradition of speculative botany that will reshape plant studies and posthumanist theory." —Stacy Alaimo, author of *Exposed: Environmental Politics and Pleasures in Posthuman Times* Science Fiction & Technoculture Studies Book Prize Winner *Radical Botany* excavates a tradition in which plants participate in the effort to imagine new worlds and envision new futures. Modernity, the book claims, is defined by the idea of all life as vegetal. Meeker and Szabari argue that the recognition of plants' liveliness and animation, as a result of scientific discoveries from the seventeenth century to today, has mobilized speculative creation in fiction, cinema, and art. Plants complement and challenge notions of human life. *Radical Botany* traces the implications of the speculative mobilization of plants for feminism, queer studies, and posthumanist thought. If, as Michael Foucault has argued, the notion of the human was born at a particular historical moment and is now nearing its end, *Radical Botany* reveals that this origin and endpoint are deeply informed by vegetality as a form of pre- and posthuman subjectivity. The trajectory of speculative fiction which this book traces offers insights into the human relationship to animate matter and the technological mediations through which we enter into contact with the material world. Plants profoundly shape human experience, from early modern absolutist societies to late capitalism's manipulations of life and the onset of climate change and attendant mass extinction. A major intervention in critical plant studies, *Radical Botany* reveals

the centuries-long history by which science and the arts have combined to posit plants as the model for all animate life and thereby envision a different future for the cosmos.

**Come Out, Come Out, Whoever You Are** Oct 24 2019 While people used to conceal the fact that they were gay or lesbian to protect themselves from stigma and discrimination, it is now commonplace for people to "come out" and encourage others to do so as well. Come Out, Come Out, Whoever You Are systematically examines how coming out has moved beyond gay and lesbian rights groups and how different groups wrestle with the politics of coming out in their efforts to resist stigma and enact social change. It shows how different experiences and disparate risks of disclosure shape these groups' collective strategies. Through scores of interviews with LGBTQ+ people, undocumented immigrant youth, fat acceptance activists, Mormon fundamentalist polygamists, and sexual harassment lawyers and activists in the era of the #MeToo movement, Come Out, Come Out, Whoever You Are explains why so many different groups gravitate toward the term coming out. By focusing on the personal and political resonance of coming out, it provides a novel way to understand how identity politics work in America today.

[The Biblical Canon Lists from Early Christianity](#)  
Jan 27 2020 The Bible took shape over the course of centuries, and today Christian groups continue to disagree over details of its contents. The differences among these groups typically involve the Old Testament, as they mostly accept the same 27-book New Testament. An essential avenue for understanding the development of the Bible are the many early lists of canonical books drawn up by Christians and, occasionally, Jews. Despite the importance of these early lists of books, they have remained relatively inaccessible. This comprehensive volume redresses this unfortunate situation by presenting the early Christian canon lists all together in a single volume. The canon lists, in most cases, unambiguously report what the compilers of the lists considered to belong to the biblical canon. For this reason they bear an undeniable importance in the history of the Bible. *The Biblical Canon Lists from Early Christianity* provides an accessible presentation of these early canon lists. With a focus on the first four centuries, the volume supplies the full text of the canon lists in English translation alongside the original text, usually Greek or Latin, occasionally Hebrew or Syriac. Edmon L. Gallagher and John D. Meade orient readers to each list with brief introductions and helpful notes, and they point readers to the most significant scholarly discussions. The book begins with a substantial overview of the history of the biblical canon, and an entire chapter is devoted to the evidence of biblical

manuscripts from the first millennium. This authoritative work is an indispensable guide for students and scholars of biblical studies and church history.

**Toxic Cyanobacteria in Water** Jun 12 2021  
Cyanobacterial toxins are among the hazardous substances most widely found in water. They occur naturally, but concentrations hazardous to human health are usually due to human activity. Therefore, to protect human health, managing lakes, reservoirs and rivers to prevent cyanobacterial blooms is critical. This second edition of *Toxic Cyanobacteria in Water* presents the current state of knowledge on the occurrence of cyanobacteria and cyanotoxins as well as their impacts on health through water-related exposure pathways, chiefly drinking-water and recreational activity. It provides scientific and technical background information to support hazard identification, assessment and prioritisation of the risks posed by cyanotoxins, and it outlines approaches for their management at each step of the water-use system. It sets out key practical considerations for developing management strategies, implementing efficient measures and designing monitoring programmes. This enables stakeholders to evaluate whether there is a health risk from toxic cyanobacteria and to mitigate it with appropriate measures. This book is intended for those working on toxic cyanobacteria with a specific focus on public health protection. It intends to empower professionals from different disciplines to communicate and cooperate for sustainable management of toxic cyanobacteria, including

public health workers, ecologists, academics, and catchment and waterbody managers. Ingrid Chorus headed the department for Drinking-Water and Swimming-Pool Hygiene at the German Environment Agency. Martin Welker is a limnologist and microbiologist, currently with bioMérieux in Lyon, France.

*Interchange Fee Economics* Jul 01 2020  
Interchange fees have been the focal point for debate in the card industry, among competition authorities and policy makers, as well as in the economic literature on two-sided markets and on the regulation of market failures. This book offers insight into the economics of interchange fees. First, it explains the nature of two-sided markets/platforms/networks and elaborates on four-party schemes and on the rationale behind interchange fees according to Baxter's model and its later refinements. It also includes the debate about the optimum level of interchange fees and its determination ("tourist test"), and presents the original framework for assessing the impact of interchange fee regulatory reductions for the market participants: consumers, merchants, acquirers, issuers, and card organisations. The framework addresses three areas of concern in reference to the transmission channels of interchange fee reductions (pass-through) and the card scheme domain (triangle: payment organisation, issuer, acquirer). The book discusses the effects of regulatory interchange fee reductions in Australia, USA, Spain, and, most specifically, Poland. It will be of interest to policy makers, card and payments industry practitioners, academics, and students.
