Language, Cognition and Gender Aug 31 2020 Gender inequality remains an issue of high relevance, and controversy, in society. Previous research shows that language contributes to gender inequality in various ways: Gender-related information is transmitted through formal and semantic features of language, such as the grammatical category of gender, through gender-related connotations of role names (e.g., manager, secretary), and through customs of denoting social groups with derogatory vs. neutral names. Both as a formal system and as a means of communication, language passively reflects culture-specific social conditions. In active use it can also be used to express and, potentially, perpetuate those conditions. The questions addressed in the contributions to this Frontiers Special Topic include: •how languages shape the cognitive representations of gender • how features of languages correspond with gender equality in different societies •how language contributes to social behaviour towards the sexes •how gender equality can be promoted through strategies for gender-fair language use These questions are explored both developmentally (across the life span from childhood to old age) and in adults. The contributions present work conducted across a wide range of languages, including some studies that make cross-linguistic comparisons. Among the contributors are both cognitive and social psychologists and linguists, all with an excellent research standing. The studies employ a wide range of empirical methods: from surveys to electro-physiology. The papers in the Special Topic present a wide range of complimentary studies, which will make a substantial contribution to understanding in this important area.

Jenufa/Katya Kabanova Jan 04 2021 This double volume contains two masterpieces of the Czech composer Leos Janacek. Jenufa was the opera which finally brought him international recognition - and, with it, fame at home. Based on Ostrovsky's The Storm, Katya Kabanova contains wonderful music inspired by the composer's love for a much younger woman. The scores are discussed by Arnold Whittall, and the background sources are variously introduced by social and literary historians. John Tyrrell comments on an important letter about the genesis of Katya; Sir Charles Mackerras describes his work as an interpreter and advocate of this brilliantly original and dramatic music. Contents: A National Composer Jaroslav Krejci; Drama into Libretto, Karel Brusak; The Challenge from Within: Janacek's Musico-dramatic Mastery, Arnold Whittall; Janacek and Czech Realism, Jan Smaczny; JenAfa: Libretto by Leos Janacek; JenAfa: English translation by Otakar Kraus and Edward Downes; A Russian Heart of Darkness, Alex de Jonge; Janacek's forgotten commentary on 'Katya Kabanova', John Tyrrell; Katya Kabanova: Libretto by Leos Janacek; Katya Kabanova: English translation by Norman Tucker; Janacek's Operas - Preparation and Performance, Charles Mackerras

A STUDY OF THE THREE ACT STRUCTURE Oct 25 2022 A STUDY OF THE THREE ACT STRUCTURE - THE WIZARD OF OZ, CITIZEN KANE, CASABLANCA, CHINATOWN covers the history of cinematic practice of the three act structure during both the World War II period (1938-1945) and the Post-War period (1945-present). This is accomplished through a pure and comprehensive analysis highlighting the most popular classical films during the period and Hegelian dialectics which vigorously analyses the narrative development of each film in detail. Ryota explains narrative factors leading to stability and dynamics in Hollywood cinema tales and includes close analyses of plot points, sequences and Acts. As it ranges across decades, examining classics like The Wizard of Oz, Citizen Kane, and Casablanca as well as Roman Polanski's masterpiece Chinatown, this book provides a vivid and engaging interpretation of how Hollywood moviemakers have adapted Western tradition of cinematic storytelling that continues to engage audiences around the world. Moreover, throughout this book the author treats the three-act structure as film narrative structure in completed form. Thus, it differs from ordinary screenplay-instruction books.

Defending Planet Earth May 08 2021 The United States spends approximately \$4 million each year searching for near-Earth objects (NEOs). The objective is to detect those that may collide with Earth. The majority of this funding supports the operation of several observatories that scan the sky searching for NEOs. This, however, is insufficient in detecting the majority of NEOs that may present a tangible threat to humanity. A significantly smaller amount of funding supports ways to protect the Earth from such a potential collision or "mitigation." In 2005, a Congressional mandate called for NASA to detect 90 percent of NEOs with diameters of 140 meters or greater by 2020. Defending Planet Earth: Near-Earth Object Surveys and Hazard Mitigation Strategies identifies the need for detection of objects as small as 30 to 50 meters as these can be highly destructive. The book explores four main types of mitigation including civil defense, "slow push" or "pull" methods, kinetic impactors and nuclear explosions. It also asserts that responding effectively to hazards posed by NEOs requires national and international cooperation. Defending Planet Earth: Near-Earth Object Surveys and Hazard Mitigation Strategies is a useful guide for scientists, astronomers, policy makers and engineers.

Near-Earth Object Surveys and Hazard Mitigation Strategies Aug 11 2021 The United States is currently the only country with an active, government-sponsored effort to detect and track potentially hazardous near-Earth objects (NEOs). Congress has mandated that NASA detect and track 90 percent of NEOs that are 1 kilometer in diameter or larger. These objects represent a great potential hazard to life on Earth and could cause global destruction. NASA is close to accomplishing this goal. Congress has more recently mandated that by 2020 NASA should detect and track 90 percent of NEOs that are 140 meters in diameter or larger, a category of objects that is generally recognized to represent a very significant threat to life on Earth if they strike in or near urban areas. Achieving this

goal may require the building of one or more additional observatories, possibly including a space-based observatory. Congress directed NASA to ask the National Research Council to review NASA's near-Earth object programs. This interim report addresses some of the issues associated with the survey and detection of NEOs. The final report will contain findings and recommendations for survey and detection, characterization, and mitigation of near-Earth objects based on an integrated assessment of the problem.
