How To Read And Critique A Scientific Research Article: Notes To Guide Students Reading Primary Literature (With Teaching Tips For Faculty Members) Aug 14 2021 Given the explosion of information and knowledge in the field of Life Sciences, adapting primary literature as materials in course work as part of active learning seems to be more effective in improving scientific literacy among science undergraduates than the pure transmission of content knowledge using traditional textbooks. In addition, students also read research articles as part of undertaking laboratory research projects useful for preparing them for graduate school. As such, a good grasp of reading and analytical skills is needed for students to understand how their research project contributes to the field that they are working in. Such skills are being taught at UK and USA universities. In Asia, this approach in teaching has not yet been as widespread, although similar ideas are beginning to be used in education. Written as a quick guide for undergraduate students and faculty members dealing with scientific research articles as part of a module or research project, this book will be useful, especially in Asia, for students and faculty members as the universities look to incorporating the use of scientific research articles in their undergraduate teaching. For Life Science students, the first time they encounter a primary literature can be rather daunting, though with proper guidance, they can overcome the initial difficulties and become confident in dealing with scientific articles. This guidebook provides a structured approach to reading a research article, guiding the reader step-by-step through each section, with tips on how to look out for key points and how to evaluate each section. Overall, by

helping undergraduate students to overcome their anxieties in reading scientific literature, the book will enable the students to appreciate better the process of scientific investigations and how knowledge is derived in science.

RESEARCH IN REHABILITATION COUNSELING Aug 26 2022 **RESEARCH IN REHABILITATION COUNSELING** provides the basics that one would need to begin conducting a research investigation. It was written as a primary text for graduate level students and practitioners concerning the role of research in contemporary rehabilitation counseling. It is the authors' intent to provide a comprehensive overview of the philosophical, ethical, methodological, and analytic fundamentals of social science research, as well as to specify aspects of rehabilitation research that distinguish it from scientific inquiry in other helping professions. It has been thoroughly revised to accurately reflect the variation and wealth of research methodologies used in contemporary rehabilitation counseling research—more than 300 new references have been added. Most of the research examples cited were published in peer-reviewed rehabilitation counseling journals over the past decade, and these examples represent the current status of research methods as well as the most relevant contemporary topic areas of research and scholarship in the field. Accordingly, it may be used both as a research textbook and

as a general introduction to the current scholarship. Because this book was written as an introductory research methods textbook for graduate students in rehabilitation counseling, the authors focus much of the information contained herein on the role of readers as professional consumers of rehabilitation research. Integrating Evidence into Practice for Impact, An Issue of Nursing Clinics of North America,
Dec 18 2021 This issue begins with an overview that distinguishes evidence-based practice (EBP) and translation science, followed by a description of Hawaii's statewide EBP program that uses active and multifaceted translation science strategies to facilitate the rate and extent of adoption of EBP changes. With one exception, the remaining articles describe individual EBP projects from five different health care facilities that used the Iowa Model to guide their work.

Each article includes an evidence summary, a description of implementation strategies, an evaluation of the innovation, and lessons learned. These completed projects were initiated between 2009 and 2012, address a variety of topical nursing issues, and, for the most part, focus on preventing complications (ie, blood sugar elevations, increased lengths of stay, extubation failures, noise-related injury, pain, surgical site infections, pneumonia, restraint use, delirium, and fever). An additional article describes the use of evidence to inform simulation-based learning, a possible strategy for ensuring competencies in and compliance with EBP interventions. Nursing leaders will come away with solid information about utilizing EBP to improve patient outcomes. The Hawaii program demonstrates that health care quality can be realized by employing the best available evidence and empowering the nursing workforce. It also offers a glimpse of the care that the future nursing workforce could provide to create a health system that provides accessible, affordable and quality care to everyone in the United States.

Dr Elisa Lewis, Senior Lecturer, London South Bank University "Alex Shepherd offers an accessible forensic filleting of published research articles, with helpful how-to guides showing what questions to ask and (more importantly) what the answers mean." Gina Rippon, Professor Emeritus of Cognitive Neuroimaging, Author of *The Gendered Brain* If something is published, does that mean it's true? *Critical Analysis in Experimental Psychology* encourages the critical reading and analysis of psychological research reports and shows how design principles and statistics are applied. A.J. Shephard empowers you to read between the lines of any published study and draw your own conclusions. Using synopses of published research articles as examples, the book shows how to work out if summary claims made by authors or the media accurately reflect an experiment's real findings. Through guided analysis of both quantitative and qualitative real-world research, you will learn to:

- Review research articles comprehensively and critically
- Understand the rationale, logic, and purpose of an article
- Identify the hypotheses (whether stated or unstated)
- Describe and assess the suitability of the research methods used
- Analyse the implied interpretation of the results,
- Become an active – rather than a passive – reader of scientific articles.

This book gives new insight into published research articles, helping you feel less like a student and more like a researcher. The critical skills learned will help you to navigate through the confusing science messages we are exposed to through all types of media. Dr A.J. Shepherd has over 20 years of experience teaching *Critical Analysis*. She is a Reader in Psychology at Birkbeck, University of

London, UK and since 2004 she has run the third year Critical Analysis course, which she also designed.

Research in Special Education Mar 21 2022 The primary purpose of this book is to offer a broad-based examination into the role of scientific inquiry in contemporary special education. As with the first two editions, which were published in 2001 and 2011, the goal is to provide a comprehensive overview of the philosophical, ethical, methodological, and analytical fundamentals of social science and educational research. Aspects of special education research that distinguish it from scientific inquiry in other fields of education and human services are specified. Foremost among these distinctions are the research beneficiaries—children with disabilities, their parents, the special educators; availability of federal funds for research and demonstration projects that seek to improve educational outcomes; and the historical, philosophical, and legislative bases for the profession of special education. This new edition represents a revision of more than 30 percent with over 250 new references. Each chapter is thoroughly updated with new developments in research topics, designs, and methods that have emerged over the past decade in the field of special education. This unique book is an excellent resource guide for graduate-level students, practitioners, teachers in the field of special education, disability studies, early intervention, school psychology, and child and family services.
