*Lost Decades in Growth Performance* May 11 2021 There have been many noticeable incidents of 'lost decades' in economic growth, occurring in countries across the world. It has been found that in many economies, the lost decade phenomenon persists, even after the conventional set of contributing factors such as per capita income, fertility rate, life expectancy, rule of law, educational attainment, ratio of investment to national income, and openness have been taken into account. This book explains where and how these lost decades in economic growth occur in the world. The authors identify that dominant macroeconomic factors contributing to their occurrence are an abnormal supply of credits relative to national income, and poor demand management. The study pays special attention to the cases of Japan, South Korea and Taiwan, exploring their specific cases and analyzing contributing factors. While Japan suffered from excessive credit prior to the bubble bursting, and from insufficient domestic demand subsequently, Korea's growth has been stunted through structural imbalances between and within industries, as well as through changes in the orientation of public policies from growth to equality. Adversely, reduced economic growth in Taiwan has led from its populism-ridden democracy and mass media, as well as from internal disputes over national identity. *Lost Decades in Growth Performance* provides a revealing insight into the factors affecting economic growth across the world, and will be an invaluable resource for anyone with an interest in global and Asian economics. It also offers a fundamental source of reference for students and academics in general equilibrium models, economic development and East Asian economies.

*The Case for the Green New Deal* Aug 14 2021 What is the Green New Deal and how can we afford it? To protect the future of life on earth, we need to do more than just reimagine the economy—we have to change everything. One of the seminal thinkers of the program that helped ignite the US Green New Deal campaign, Ann Pettifor explains how we can afford what we can do, and what we need to do, before it is too late. *The Case for the Green New Deal* argues that economic change is wholly possible, based on the understanding that finance, the economy and the ecosystem are all tightly bound together. The GND demands total decarbonization and a commitment to an economy based on fairness and social justice. It proposes a radical new understanding of the international monetary system. Pettifor offers a roadmap for financial reform both nationally and globally, taking the economy back from the 1%. This is a radical, urgent manifesto that we must act on now.

**The Economics of Workers' Management** Feb 08 2021 The object of this study, originally published in 1972, consists in developing, against the background of Yugoslav theory and practice, a general theory of the behaviour of economic productive units (the enterprises), managed by those who work therein (the workers or producers) whose reward for work in their share in the group's net income. This title will be of interest to students of employee ownership and economic democracy.

*The Impact of Economic Reform on Productivity Growth in Chinese Industry* Dec 26 2019 TChina Paper 91/6' from the Economics Division of the Research School of Pacific Studies, ANU, this paper examines economic reform on productivity growth in Chinese industry. It assesses the impact of the special trade reform policies through case studies of Xiamen and Shanghai.

**STRATEGIC MANAGEMENT** Mar 29 2020 The second edition of the book is richer in contents with updated concepts on strategic management. The entire text is restructured and fine-tuned to meet the needs of the students pursuing MCom/MBA/PGDBA and identical courses. The book, now divided into four parts, is focused on providing the readers broad perspectives on formulation of strategy, its processes, implementation as well as evaluation so as to assess its effectiveness. The book brings into fore the learning that a strategy is good if it passes the test of feasibility, acceptability and suitability. Now, the text incorporates 44 live cases of successful, reputable organizations, which have excelled as a result of application of strategic planning/strategic thinking in formulation and implementation of their strategies. Besides, references have been made of the practices in 65 successful global companies while discussing the concepts and practices. **NEW TO THE SECOND EDITION** Beginning with an overview of strategic management, the text analyzes important topics such as • Environmental macro- and micro-factors of the organization, which underline success of an enterprise • What develops sustainable competitive advantage in organizations • Eight implementation techniques which are helpful in successful implementation of strategies • Evaluation of strategy and GE-McKinsey matrix on measurement of organizational success • Role and traits of strategic leadership for successful implementation of strategy in face of uncertain, turbulent and complex global market • Learning from the case study on Mobil company

*Absentee Ownership* Oct 24 2019 *Absentee Ownership* is an inquiry into the economic situation as it has taken shape in the twentieth century,

particularly as exemplified in the case of America. According to Thorstein Veblen, absentee ownership is the main and immediate controlling interest in the life of civilized men. It is the paramount issue between the civilized nations, and guides the conduct of their affairs at home and abroad. World War I, says Veblen, arose out of a conflict of absentee interests and the peace was negotiated with a view to stabilize them. Part I of the book is occupied with a summary description of that range of economic circumstances and that sequence of economic growth and change that led up through the nineteenth century and have come to a head in the twentieth century. Part II is an objective, theoretical analysis of those economic circumstances described in the first part of the book. Marion Levy writes in his introduction about the phrase "absentee ownership" and how it has a definite connotation, representing a dark figure in the economic system, a frustration of desired levels of self-sufficiency. In the early days, the giants of business enterprise had faces--Rockefeller, Vanderbilt, Ford, Edison--but they all turned into faceless bureaucracies, says Levy. The giants may not have been nice, but they had faces and human traits. Absentee ownership wiped that out for the common man. Veblen's book continues to be of vital importance to the studies of economics, political theory, and sociology.

The Logic of Privatization Sep 22 2019 Privatization programs may be accepted for implementation or rejected, a fact that has been ignored, thereby biasing the work of many social scientists.

**Dispelling the Myth of Globalization** Aug 02 2020 In the future, some regions of the world will probably experience vigorous economic growth, while others struggle to survive. Unless the United States recognizes these probabilities and the implications of them, standards of living in this country will continue to decline. This is the warning Hazel Johnson gives in this book--an analysis of global economic trends and capital flows that reveals strong regional patterns of development. The book was written when the appeal of globalization was almost irresistible: communism was being overthrown and global market economies seemed inevitable. But Johnson detected factors that would prevent globalization, for example: a closed Japanese society that focused on winning the economic war, a Germany that would overextend itself to achieve reunification, and a Latin America whose problems would be felt more by the United States than by any other developed country. Analysts are only now beginning to face these realities. Most notably, Lester Thurow (*Head to Head*, 1992) has acknowledged all these factors and concludes (subsequent to the publication of Johnson's book) that regional trading blocks will, in fact, emerge. Johnson's volume is unique in viewing the world in its entirety rather than treating one country or region at a time, and in presenting events in a historical context to explain current and probable future economic relationships among countries. The work is compelling because it dares to examine the economic behavior of countries with a critical rather than a diplomatic eye. It should be of interest to scholars and policymakers in international finance and trade, as well as those studying development and international economics.

*Foreign Investment and Socio-Economic Development* Jul 13 2021 Godfrey Yeung investigates the causes and socio-economic effects of foreign direct investment in the Dongguan municipality of southern China during the 1990s. As the first comprehensive research based on primary quantitative and qualitative data undertaken in Dongguan, it illustrates that the inflow of foreign capital has both 'desirable' and 'undesirable' socio-economic effects. Yeung proposes a new 'dynamic symbiosis' paradigm of foreign direct investment in order to illuminate the complex political and socio-economic relationships of the area.

The Dynamics of Growth in Emerging Economies May 31 2020 How can Turkey increase its medium- and long-term growth potential? Despite episodes of fast growth, this has become a vital question for the Turkish economy, in order to avoid being stuck in a middle-income trap. There has been an increase in the number of studies presenting growth in Turkey and quantifying the sources of economic growth, however, due to the difference in the main underlying assumptions and the time period covered in these studies, the results differ. The second strand of literature on growth in Turkey identifies the relative underperformance of the Turkish economy by developing models with microeconomic foundations. Given the fact that there are a large number of studies investigating the macro dynamics of growth in Turkey, the book's unique focus on the "neglected" issues in growth discussions closes the gap in the existing literature. It addresses the micro, macro, regional, and gender aspects, the environment-energy-growth nexus, as well as the microeconomic dynamics of growth. It also analyses the other significant determinants of long run growth in Turkey such as import dependency and saving-investment decision. The authors provide a macro overview of all of the precluded subjects in order to evaluate them in relation to one other, as well as to derive policy conclusions from them. This book primarily targets academics as well as graduate and undergraduate social sciences and humanities students both in Turkey and other countries. It is also a must read for researchers and policy makers not only in Turkey but also in other developing economies and is of interest to specialists of non-governmental and non-profit organizations.

The foundational text with case studies is also peppered with anecdotes on the various technological innovations which have shaped markets throughout history. The authors provide several models and tools that are essential for analysis, as well as activities that will allow the reader to reflect, analyze, and apply the knowledge and tools presented in each chapter. Introduction to Digital Economics is a definitive guide to the complexities and nuances of this burgeoning and fascinating field of study.

**The Impact of Economic Globalization on Third World Countries** Jul 01 2020 This essay is written in a political science and economic perspective with a particular reference to global trend. It is a study of comparative politics and political economy. This study examined the globalization and sovereignty of the third world countries and Nigeria in particular. The objective of the study is to examine the great changes involved in restructuring the world into developed and developing countries, industrializing and industrialized and core and periphery nations. The essay also revealed that Nigeria is a dependent nation in the international, political and economic system. It was taken into the economics of the western capitalist countries by its domestic bourgeoisie and the unequal relations in terms of trade exports of semi processed primary products and imports capital and consumer goods, the external linkages of the country with its former colonialist and America further reduced Nigeria into a subservient status. The persistent and extensive interventions of the developed countries are the underlying reasons for the socio-economic problems of the underdeveloped countries and Nigeria in particular. These coupled with aids, loans, military assistance which make the developed countries to determine for Nigeria the direction of its economy and system of administration to adopt - western type democracy. Now that Nigeria is a democratic nation through the gospel of the globalists has attained the status of higher status in their own face.

**The Economics of Motorsports** Nov 05 2020 This book, the first study of its kind, examines the economics behind motorsports, in particular Formula One. Chapters discuss the costs involved in Formula racing and how they are borne by teams, promoters and racers. The book also looks at how society, the public and the private sectors stand to benefit economically from the motorsport industry. Other issues like the economics of TV rights, sponsorship and sustainability are also addressed, again for the first time in an economics book. Moving beyond the economics of what happens off the track, the book also undertakes a serious examination of what goes in to making a winning team and what having a winning racer can do for a team's fortunes. Mourão's highly relevant and contemporary book also looks at how motorsport teams confront the challenges of the modern sporting world, including the changing dynamics of sports media and considers the future of Formula 1 as motorsports evolve.

**Ecological Economics and Industrial Ecology** Apr 29 2020 Holistic in approach and rooted in the real world Ecological Economics and Industrial Ecology presents a new way of looking at environmental policy; exploring the relationship between ecological economics and industrial ecology. Concentrating on the conceptual background of ecological economics and industrial ecology, this book: provides a selection of recommendations for a product-oriented environmental policy, based on the author's case study of the IPP contributes to the development of a consistent body of knowledge regarding sustainable development. A topical and critical review, this book should be read by academics and policy makers alike, specifically those engaged with the concepts surrounding sustainable development and the rationale for more restrictive environmental policies.

**The Economics of Sustainable Development** Mar 21 2022 This book highlights methodological approaches for the economics of sustainable development and brings together recent empirical work done in India, especially by Dr. Surender Kumar and Dr. Shunsuke Managi. Various chapters in this book use Indian data to show the very wide applicability of methodologies in the theory of production for dealing with many empirical issues of environmentally sustainable development in a developing country. I congratulate the authors for the time and effort devoted to compiling this very useful reference on the subject and the publishers for publishing this volume. The methodologies of cost functions, distance functions, and production functions have been used in many recent studies and in the studies reported in this book for environmental valuation. Environmental valuation is required for designing policy instruments like pollution taxes for sustainable development and for measuring green GDP. The UN methodology of integrated environmental and economic accounting provides ways of measuring the cost of maintaining environmental resources at sustainable levels or the maintenance cost for estimating green GDP. Some of the chapters in this book show that the methodology of distance functions could be used for estimating the cost of environmentally sustainable development.

**Managerial Economics** Jul 25 2022 Thoroughly updated to reflect the post-crisis, global, and digital economy.

**Ideas and Economic Policy in Latin America** Jun 19 2019 How are the economic policies which developing countries adopt selected and how do they change? Who are the key players in economic development policies? Professor Anil Hira answers these questions head on by suggesting new ways of looking at how ideas affect economic policy. Through concrete case studies of networks in Latin America, he analyzes how ideas are introduced and why certain ones "win out" in the economic policy process. The cohort groups who create economic policies are the key figures in this book. These characters are shown to extend beyond Latin America to countries as diverse as Indonesia and Egypt.

**Economics and Performativity** Dec 18 2021 Economists do more than merely describe an external economic world. They shape it in the image of their theories and models. This idea, following the philosophy of language, puts forward that economic theories are performative, and not only descriptive. This idea has become a powerful critique of the scientificity of economics since it removes the idea of an external world against which our description could be evaluated as truth. If any theory can become true, there are no true theories per se because there is no such thing as a pre-existing economy to describe. Is such a relativist stance a fatality? This is the question at stake in this book. Furthermore, the author asks if any theory is able to 'perform' the social reality, or are there actually some limits to performativity? For philosophers, a performative statement is a statement that cannot fail to mean something, but can fail to do what it calls for. The state of the world may or may not be changed; the performative statement may be happy or unhappy. In economic terms, this can be interpreted as: some theories change the world while some do not. This book argues that this possibility of failure, a perspective previously missing from discussions on the subject, should be at the heart of any definition of failure. Taking on the question of why some theories change the world while others do not, this volume will be of interest to those studying advances courses on the philosophy of economics as well as those studying and researching in the areas of the philosophy of sciences and sociology of science and economics.

**The Economic Case for LGBT Equality** Dec 06 2020 An economist demonstrates how LGBT equality and inclusion within organizations increases their bottom line and allows for countries' economies to flourish We know that homophobia harms LGBT individuals in many ways, but economist M. V. Lee Badgett argues that in addition to moral and human rights reasons for equality, we can now also make a financial argument. Finding that homophobia and transphobia cost 1% or more of a country's GDP, Badgett expertly uses recent research and statistics to analyze how these hostile practices and environments affect both the US and global economies. LGBT equality remains a persistent and pertinent issue. The continued passing of discriminatory laws, people being fired from jobs for their sexual orientation and/or gender identity, harassment and bullying in school, violence and hate crimes on the streets, exclusion from intolerant families, and health effects of stigma all make it incredibly difficult to live a good life. Examining the consequences of anti-LGBT practices across multiple countries, including the US, Canada, the UK, Australia, India and the Philippines, Badgett

reveals the expensive repercussions of hate and discrimination, and how our economy loses when we miss out on the full benefit of LGBT people's potential contributions.

**Cases in European Competition Policy** May 23 2022 Competition between firms is usually the most effective way of delivering economic efficiency and what consumers want. However, there is a balance to be struck. Firms must not be over-regulated and so hampered in their development of innovative products and new strategies to compete for customers. Nor must they be completely free to satisfy a natural preference for monopoly, which would give them higher profits and a quieter life. The economic role of competition policy (control of anticompetitive agreements, mergers and abusive practices) is to maintain this balance, and an effective policy requires a nuanced understanding of the economics of industrial organization. *Cases in European Competition Policy* demonstrates how economics is used (and sometimes abused) in competition cases in practical competition policy across Europe. Each chapter summarizes a real case investigated by the European Commission or a national authority, and provides a critique of key aspects of the economic analysis.

***Social Trust and Economic Development*** Sep 03 2020 In just one generation, South Korea has transformed from a recipient of foreign aid to a member of the G20. In this informative book, South Korea is used as a case by which to explore and illustrate specific issues arising from the complex relationships between the nation's economic development and society. O. Yul Kwon considers the task of achieving sustainable and equitable social and economic development in South Korea. The author presents an in-depth analysis from macro perspectives as well as examining micro-level relationships between economic development and social trust in the recent past. Grounded in empirical research of South Korean society and economy, this book offers practical suggestions by which to achieve sustainable and equitable development in South Korea. This insightful and timely book provides valuable information for a scholarly audience interested in South Korean history, economics and society, and for researchers investigating the significance of the relationship between economic development and society as well as social trust.

**Using Artificial Neural Networks for Timeseries Smoothing and Forecasting** Apr 22 2022 The aim of this publication is to identify and apply suitable methods for analysing and predicting the time series of gold prices, together with acquainting the reader with the history and characteristics of the methods and with the time series issues in general. Both statistical and econometric methods, and especially artificial intelligence methods, are used in the case studies. The publication presents both traditional and innovative methods on the theoretical level, always accompanied by a case study, i.e. their specific use in practice. Furthermore, a comprehensive comparative analysis of the individual methods is provided. The book is intended for readers from the ranks of academic staff, students of universities of economics, but also the scientists and practitioners dealing with the time series prediction. From the point of view of practical application, it could provide useful information for speculators and traders on financial markets, especially the commodity markets.

***Social Partnership and Economic Performance*** Feb 20 2022 In recent years, and to varying degrees, there has been a marked trend towards decentralisation of labour market regulation in many European countries. The authors of this book seek to assess the impact of social partnership and social protection on the macroeconomic performance of nine member states of the European Union - namely Austria, France, Germany, Ireland, Italy, the Netherlands, Spain, Sweden and the UK. They compare the performance outcomes of these countries with the USA over the last twenty years and find that, in broad terms, the countries that perform 'best' are those that have adapted and decentralised their systems of social partnership and protection.

***Analysis of Multidimensional Poverty*** Apr 10 2021 Poverty is a paradoxical state. Recognizable in the field for any sensitive observer who travels in remote rural areas and urban slums and meets marginalized people in a given society, poverty still remains a challenge to conceptual formalization and to measurement that is consistent with such formalization. The analysis of poverty is multidisciplinary. It goes from ethics to economics, from political science to human biology, and any type of measurement rests on mathematics. Moreover, poverty is multifaceted according to the types of deprivation, and it is also gender and age specific. A vector of variables is required, which raises a substantial problem for individual and group comparisons necessary to equity analysis. Multidimensionality also complicates the aggregation necessary to perform the efficiency analysis of policies. In the case of income poverty, these two problems, equity and efficiency, have benefited from very significant progress in the field of economics. Similar achievements are still to come in the area of multidimensional poverty. Within this general background, this book has a very modest and narrow-scope objective. It proposes an operational methodology for measuring multidimensional poverty, independent from the conceptual origin, the size and the qualitative as well as the quantitative nature of the primary indicators used to describe the poverty of an individual, a household or a sociodemographic entity.

***The Development of Marketing Management*** Jan 27 2020 This book explores the development of US marketing management thought in the early part of the 20th century, focusing on the relationship between the thought and historical contexts rather than on theoretical developments.

**Private Policing of Economic Crime** Jun 12 2021 This book discusses private policing conducted by fraud examiners and financial crime specialists

when there is suspicion of white-collar crime. The theory of convenience applies to the suspected crime, while the maturity model applies to the conducted investigation. Private policing of economic crime by fraud examiners in internal investigations is a topic of increasing concern as there is a growing business for law firms and auditing firms to conduct inquiries and reviews when there is suspicion of misconduct, wrongdoing, and crime by white-collar offenders. The key features of this book are the application of a structural model for convenience theory and the application of a maturity model for fraud examinations. The structural model assesses convenience themes for motive, opportunity, and willingness in each case study, while the maturity model assesses the level of private policing maturity in fraud examinations. For the first time, two emerging frameworks to study white-collar offenses and private policing maturity are introduced and applied to a number of cases from Denmark, Iceland, Moldova, the Netherlands, Norway, Sweden, and Switzerland. This book will be essential to those studying law, business, and criminology, as well as practicing fraud examiners.

Business Analysis & Valuation Aug 22 2019 Financial statements are the basis for a wide range of business analysis. Managers, securities analysts, bankers, and consultants all use them to make business decisions. There is strong demand among business students for course materials that provide a framework for using financial statement data in a variety of business analysis and valuation contexts. **BUSINESS ANALYSIS & VALUATION: USING FINANCIAL STATEMENTS, TEXT & CASES, 4E** allows you to undertake financial statement analysis using a four-part framework--(1) business strategy analysis for developing an understanding of a firm's competitive strategy; (2) accounting analysis for representing the firm's business economics and strategy in its financial statements, and for developing adjusted accounting measures of performance; (3) financial analysis for ratio analysis and cash flow measures of operating; and (4) prospective analysis. Then, you'll learn how to apply these tools in a variety of decision contexts, including securities analysis, credit analysis, corporate financing policies analysis, mergers and acquisitions analysis, and governance and communication analysis. This text also offers one Harvard case per chapter as well as an entirely separate section (Section 4) for additional cases!
